

CODE	Art. 2260
TRADE NAME	ASFALBIT
PRODUCT TYPE	ASFALTO A FREDDO

Technical characteristics

Asfalbit is a bitumen emulsion in aqueous solution used in the building sector as waterproofing and protective. The product is particularly suitable for waterproofing terraces of any inclination, foundations, external walls to be covered with earth and roofs under screeds.

Applications

The application can be carried out by brush, roller or brush.

Make sure that the surfaces to be treated are perfectly de-dusted, clean and free from residues of disarming oils and that the cement supports (concrete or mortar) are stable, regularized and well consolidated. Mix each jar carefully so as to homogenize and mix any separation of water. On porous surfaces we recommend a first coat of ASFALBIT diluted 10% with water; the second coat should be applied after 3-6 hours, when the first coat is completely dry.

To make waterproofing, spread ASFALBIT in at least two layers until the desired thickness is obtained.

Important

Avoid extreme heat (> 35 ° C) and cold (<5 ° C) during application. On very hot substrates, moisten the surface.

Avoid application in conditions of high humidity or imminent rainfall as the correct drying would be compromised.

Store and use at temperatures not lower than +5 ° C.

Always carry out a preliminary test before use.

Use according to good working practices avoiding, however, to disperse the product or packaging in the environment.

Chemical and Physical Property

Physical state	Liquid dense
Colour	Dark brown
Odour	Characteristic
Flash point	-
Yield	From 1 to 4 mq/kg
Relative density	1,00 - 1,008 g/cm3
Solubility	soluble in water
Storage in original packaging in a dry place, away from frost	12 months a temperature belowe 5°C
