

CODE	Art. 3318
TRADE NAME	STUCCO PER VETRI GRIGIO
PRODUCT TYPE	SEALANT

Technical characteristics

The product is very viscous, it is made from a mixture of vegetable oils, mineral aggregates and lumps, to very slow hardening due to polymerization of the oils contained in it, forming a plasticized lattice with the action of air. Generally it is used for the laying of glass sheets of metal or wood frames, rarely plastic materials. The product is slightly thixotropic.

Applications

Clean and dry the seat of the frame on which it will apply the putty; detach a portion of sufficient putty to cover the perimeter portion to be sealed. Manipulating the putty with hands up to make it soft, and form with these cylindrical strips about 3-4 mm in diameter, according to the amplitude of the area to be sealed; lay these strips on the base frame placed in a horizontal and cover the entire perimeter. Apply the glass plate on the cylindrical shapes and gently press until it fits perfectly; take another aliquot of mastic and work in the same way, but by making the strips about 2 cm in diameter according to the amplitude to be sealed, and apply them on the glass surface along the entire perimeter of the frame making it adhere to the edges of the frame and to the glass. The excess putty must be removed. The mastic thus applied can be painted after not less than 10 days from the application with high solid or water-based coatings. It's necessary to carry out a preliminary test before using.

Important

Use according to good working practices avoiding however, dispose of the product or the packaging environment

Chemical and Physical Property	
Physical state	Pasty liquid
Colour	Grey
Relative density at 20°C	1,79 kg/l
Dynamic viscosity at 20 °C	70,13 cP
Kinematic viscosity at 20 °C	39,18 cSt
Kinematic viscosity at 40 °C	>20,5 cSt
